

Adding Audio

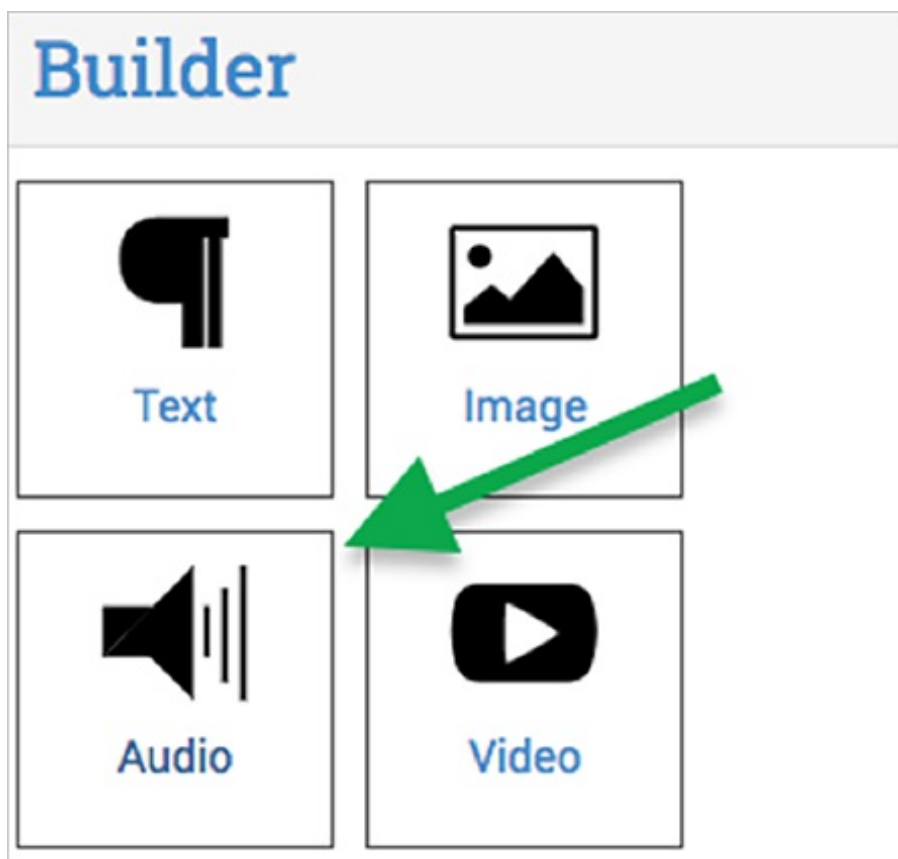

Last Modified on 01/07/2020 1:39 pm EST

When creating Paks for coaching or training an employee how to position, explain or sell, audio tracks reinforce text with example. Enlist others to record their examples of how to say it.

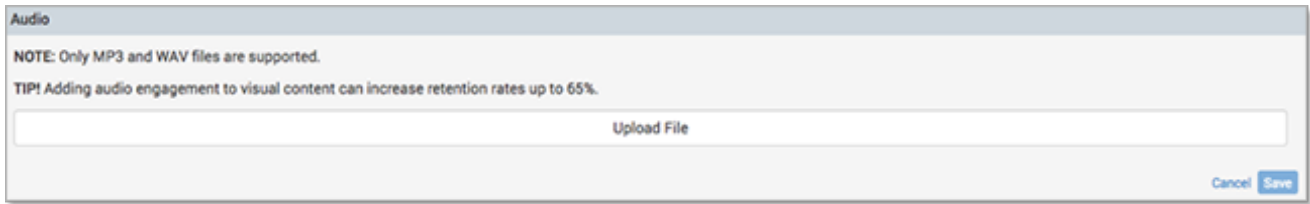

Veelo supports MP3 files.

Step by step:

Click the **audio icon** to open the frame

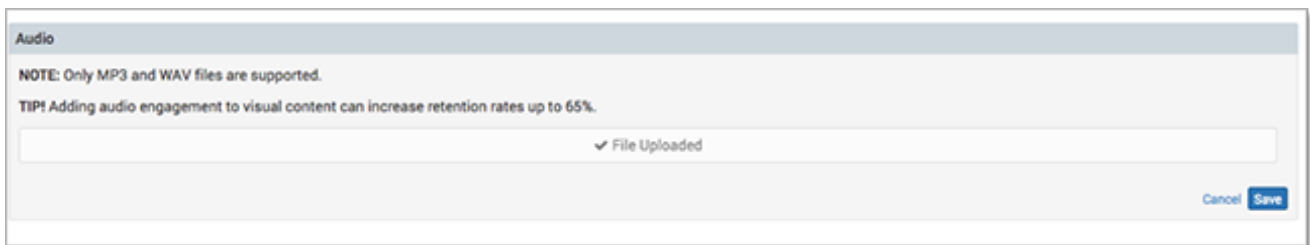

To upload a file, click on **Upload File**. Then add the file.

The screenshot shows a modal window titled "Audio". It contains the following text: "NOTE: Only MP3 and WAV files are supported." and "TIP! Adding audio engagement to visual content can increase retention rates up to 65%." Below the text is a large, empty rectangular input field with the text "Upload File" centered inside it. In the bottom right corner, there are two buttons: "Cancel" and "Save".

Click **save**.

The screenshot shows the same "Audio" modal window. The text and tip are identical to the previous screenshot. However, the large input field now contains the text "✓ File Uploaded" centered inside it. The "Cancel" and "Save" buttons remain in the bottom right corner.
